

Product Options & Variations

Product Options

Improve the customer experience and increase conversion rates with product options

When it comes to your online store, the ultimate goal is to make sales. And any improvements you make to the user experience will directly impact how likely your customers are to buy.

One way to improve the shopping and checkout process is by adding product options. Product options let shoppers easily see and select their preferences on the product page, then displays their choices at checkout so they know exactly what they're getting. They'll be less likely to rethink their purchase, and more likely to click 'Buy'!

Nearly 1 out of 5 shoppers has abandoned their online cart due to a long or complicated checkout process. Simplify the process and improve your sales!

Common options are things like sizes and colors, but you can also use them for customizations like:

- Add extras like gift wrapping
- Let customers upload a file for personalization
- Offer multiple selections to configure the product

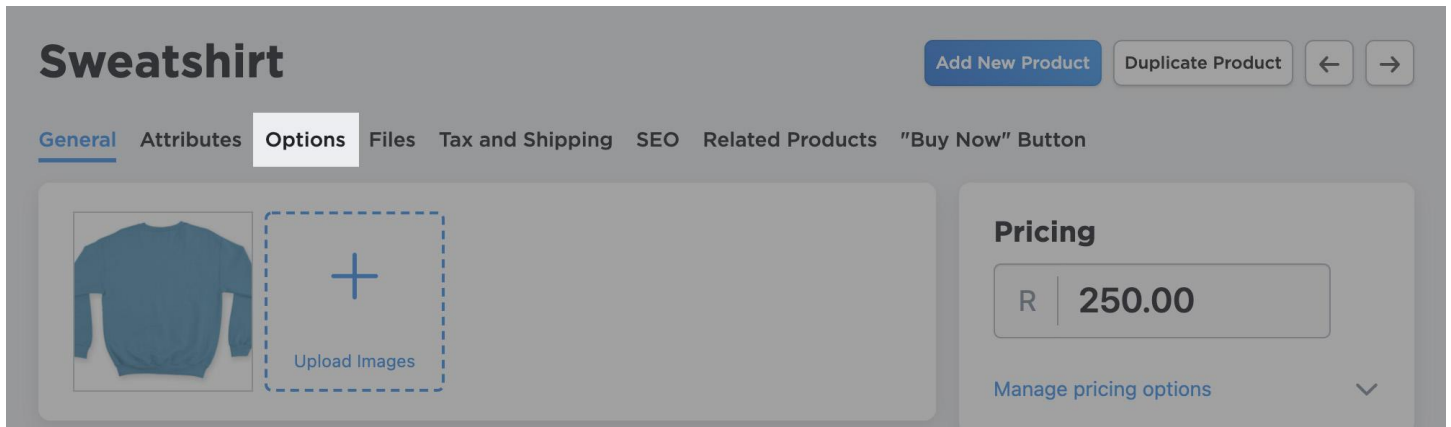

In this guide, we'll walk through how you can set up product options in your store, then take it a step further with custom variations.

You can have an unlimited number of options for each product, so go ahead and set them up now to offer your customers an easy, personalized experience!

How to create options for a product

To get started:

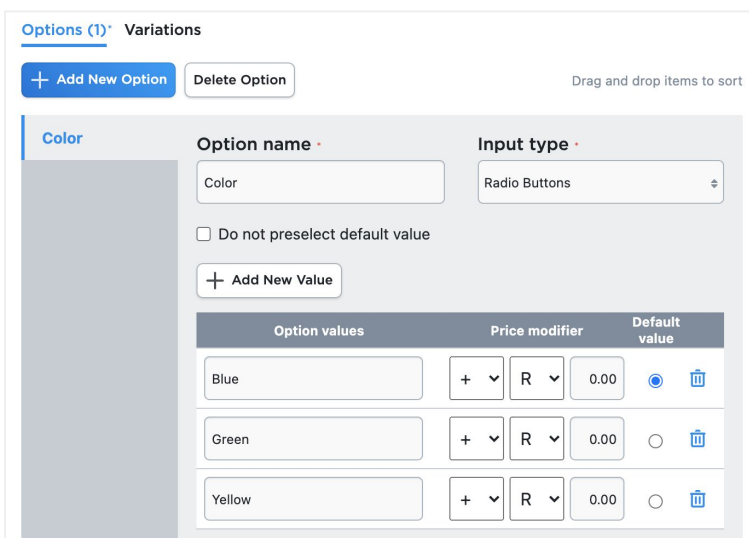

- Go to **Catalog** → **Products**
- Open the product that you want to edit
- Go to the **Options** tab

Then, add your options to the product:

- Click **+ Add New Option**
- Add the name of the option, for example: Color
- Select the input type (we'll go over these types in a minute!)
- Click **+ Add New Value**
- Add all values for the option, for example: Blue, Green, Yellow

Save your changes and preview how the product will appear in your store

Input types

There are a few ways you can present options to customers, which can be selected under **Input type**:

- **Drop-down list:** Select a single value from multiple choices. Good for when there are numerous values to choose from.
- **Radio buttons:** Select a single value from multiple choices. Good for when there are a few values to choose from.
- **Size:** Select one size from multiple size choices.
- **Checkboxes:** Select several options at once. A good use would be something like pizza toppings.
- **Text field and text area:** Type product details into a text box. The text field is a single line, while the text area allows longer submissions. Good for things like personalization, engraving, custom printing, etc.
- **Date picker:** Select a date from a popup calendar for pickup/service.
- **Upload files:** Attach files to the product when ordering. Good for things like custom portraits, logo printing, etc.

Default options

For drop-down lists and radio buttons, you can decide whether or not to preselect an option for customers. If you check **Do not preselect default value**, customers will not be able to add the product to their cart without selecting an option.

If you would like to preselect an option for customers, you can choose the default when adding the option's values.

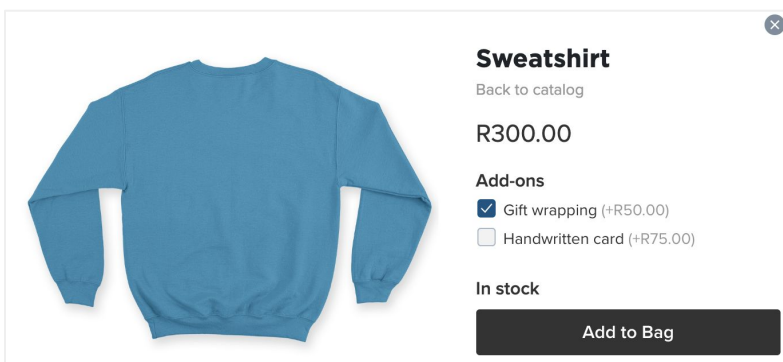

Option values	Price modifier	Default value
<input type="text" value="Blue"/>	<input type="button" value="+"/> <input type="button" value="R"/>	<input type="text" value="0.00"/> <input checked="" type="radio"/>

Price modifiers

You can further customize your product options by adding price modifiers, which increase or decrease the price based on the option a customer selects. For example, adding gift wrapping might add R50.

When a customer selects an option with a price modifier, they will see the updated product price immediately on the page, so there are no surprises.

Price modifiers can be added when using drop-down lists, radio buttons, or checkboxes. When editing the option values:

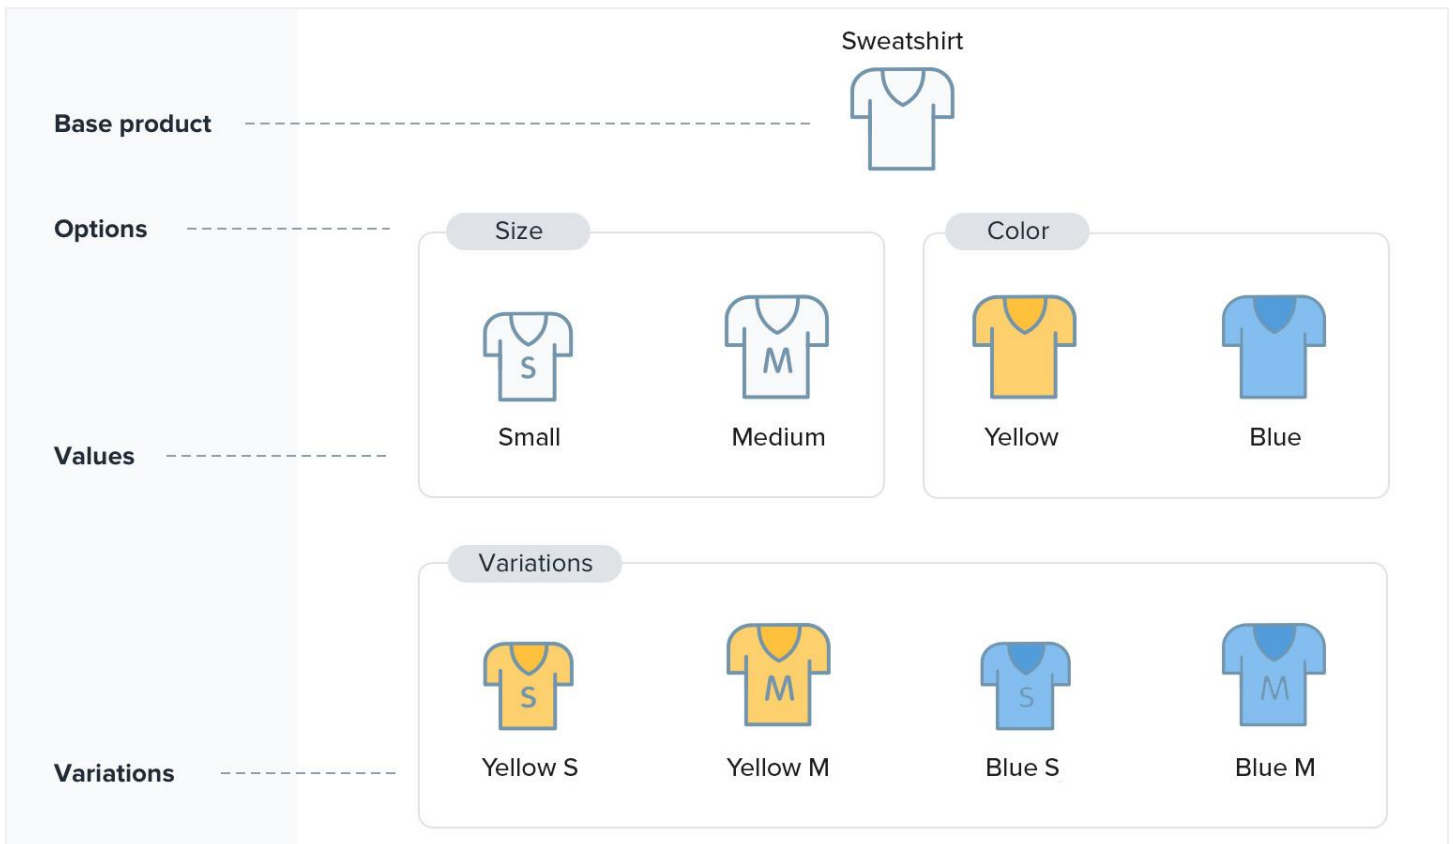

- Select if the price should increase or decrease
- Select if the adjustment is a fixed amount or a percentage
- Set the amount
- Save your changes

Option name	Input type
<input type="text" value="Add-ons"/>	<input type="text" value="Checkboxes"/>
<input type="button" value="+ Add New Value"/>	
Option values	Price modifier
<input type="text" value="Gift wrapping"/>	<input type="text" value="+"/> <input type="text" value="R"/> <input type="text" value="50"/> <input type="button" value="🗑"/>
<input type="text" value="Handwritten card"/>	<input type="text" value="+"/> <input type="text" value="R"/> <input type="text" value="75"/> <input type="button" value="🗑"/>

Product variations

Once you have set up your product options, you can create variations.*

Variations are unique sets of options that exist for a product, for example: size and color. Let's say our sweatshirt comes in two colors, yellow and blue, and two sizes, small and medium. It will have four variations:

There are several reasons why it's useful to create product variations:

- Assign different images for every set of options your product has (frequently used for apparel and shoes)
- Automatically adjust prices depending on the options your customer selects
- Track inventory with unique SKUs for each set of options to prevent overselling
- Specify the weight for each combination of options your product has to get more precise shipping rates at checkout

Let's look at how to set them up for your products!

*Product variations are available on the Business and Unlimited plans.

How to create product variations

Each of your products can have an unlimited number of options, and from them you can create an unlimited number of variations. These can vary from product to product in your store.

To create a product variation:

1. Create a new product or choose an existing product that comes with different options
2. After you set up the options (as outlined earlier in this guide), switch to the **Variations** tab
3. Click **+ New Variation**
4. Select the option values for this variation, for example:
Color—Blue and
Size—Small
5. Add the specific info for the variation's SKU, price, and weight as well as an image
6. Under Stock Control, click **Manage** to add the stock level of the variation and set the quantity for when you'll receive a low stock notification
7. Click **OK**
8. Repeat steps 3-7 for all variations of the product, and click **Save**

Make sure your options are set up using the **drop-down list**, **radio button**, or **size** input types, which will allow you to make variations.

The screenshot shows the 'Variations (0)' tab in a product management interface. At the top, there are buttons for '+ New Variation', 'Modify', and 'Delete'. A note states: 'Variations are processed from top to bottom. The first matching variation is applied.' Below this is a table with columns: 'Select: All, None', 'Options', 'SKU', 'Weight, oz', 'Stock', and 'Price, R'. The table contains one row for the 'Base product' (Default) with a blue long-sleeved shirt icon, 'Color: Any', 'Size: Any', SKU '00001', weight '0', 'In Stock' status, and a price of '250.00'. The stock level is listed as 'Unlimited'.

Select: All, None	Options	SKU	Weight, oz	Stock	Price, R
Base product Default	 Color: Any Size: Any	00001	0	In Stock	250.00
				Unlimited	

The screenshot shows the 'Variation #1' configuration form. At the top, there are dropdown menus for 'Color' (set to 'Blue') and 'Size' (set to 'S'). Below these are input fields for 'SKU' (00001-1), 'Weight, oz' (16), and 'UPC'. There is a 'Change' button next to a blue long-sleeved shirt icon. A checkbox for 'Requires shipping or pickup' is checked. The 'Price' is set to 'R 250.00'. Under 'Stock Control', the status is 'In Stock (20 it.)' with a '[Manage]' link. The 'Quantity in Stock' is set to 'Limited to 20'. A 'Send me a note when quantity in stock reaches' field is set to '5'. There are 'Ok' and 'X' buttons at the top right.

Now, you'll see all of the different variations of the base product on the **Variations** tab, along with each variation's pricing, stock, and more.

Since you added stock levels for each variation, the stock level of the base product (e.g. "Sweatshirt") should be **Unlimited**.

Options (2) Variations (4)

[+ New Variation](#) [Modify](#) [Delete](#)

Variations are processed from top to bottom. The first matching variation is applied.

Select: All, None	Options	SKU	Weight, oz	Stock	Price, R	
<input type="checkbox"/> #4 Default	 Color: Yellow Size: M	00001-4	16	In Stock [Manage] Unlimited	250.00	 
<input type="checkbox"/> #3	 Color: Yellow Size: S	00001-3	16	In Stock [Manage] Limited to 20	250.00	 
<input type="checkbox"/> #2	 Color: Blue Size: M	00001-2	16	In Stock [Manage] Limited to 10	250.00	 
<input type="checkbox"/> #1	 Color: Blue Size: S	00001-1	16	In Stock [Manage] Limited to 20	250.00	 
Base product	 Color: Any Size: Any	00001	16	In Stock Unlimited	250.00	

Editing product variations

There are a few ways to edit the product variations in your store. First, you can always update variations for a specific product following the steps listed above. Just go to the product editing page in **Catalog** → **Products**, then **Options** → **Variations**.

You can also update variations in bulk. Under **Catalog** → **Products**, select all of the products that you need to edit, then click **Bulk Update** → **Edit Selected**. This bulk product editor lets you quickly update the SKU, price, weight, quantity, and shipping requirements.

Finally, you can use the built-in import tool. While you can't create new variations with the import tool, you can update existing variations if they have unique SKUs. Just include the variations with their SKUs in a CSV file, then you can update the name, price, and weight via the import tool.

FAQ

We've answered some of the most common questions about product variations below, along with some tips to use them effectively in your store.

If I add a variation to a product, does that count as an additional product?

No! You can add as many variations as you need, and they won't count towards your limit.

Can I track the stock level of each product size?

By setting up variations, you can assign each item its own SKU and stock quantity. Then, its stock level will be automatically reduced upon a sale.

What if variation options differ within a product?

There may be cases where you do not have consistent options across a product. For example, you have blue sweatshirts in sizes XS, S, M, and L., but you only have yellow sweatshirts in M and L. In this case, you could create variations for unavailable options (for example, yellow sweatshirts in XS and S) and mark them as "Out of Stock."

Can I use the same SKU for the base product and its variations?

You can use the same SKU for a product and its variations if you don't need to track the inventory for each variation separately. However, if the stock, price, or weight differs then it's better to set a unique SKU.

How do I set a default variation?

A default variation will show up on the product page based on the default options. For example, if the default color is set to "Blue" and the default size is set to "Small," the variation "Blue, Small" will be the default. You can always select "Do not preselect default value" under the Options tab if you do not want this shown.

Can I assign UPS/EAN codes to product sizes?

You can assign unique UPC values to product variations like colors and sizes:

- Go to Catalog → Products
- Create or select a product with variations
- Go to Options, then the Variations tab in the product editing page
- Open the variation you need by clicking Manage or by clicking the edit icon
- Add the UPC value for this variation in the UPC field

Congratulations! You are now ready to set up product options and variations in your store, and better improve your customer experience — and sales!
